# Auto shut-off with TIPPMATIC®

## The power cut-off switch for energy efficiency

Looks and works like an ordinary rocker switch

Customized designs

Takes up minimal space, easy to install

Integral intelligent system

Can be switched off using a timing pulse and/or another external pulse

27 user-defined time settings

## For devices in standby or sleep mode: Eliminate phantom load!

Electrical equipment in standby mode can generate big costs: almost 100 Euros per year, on average. Some devices even use more power in standby than in actual use. That's bad for your wallet and bad for the environment.

Standby operation is the main cause of hidden power consumption. The TIPPMATIC® switch can cut off power to standby equipment automatically, using a timing pulse or another signal specified for the purpose.

## Auto shut-off can put you a step ahead

Electrical equipment in standby mode costs the economy billions, and in Germany alone it accounts for 14 million tons of CO<sub>2</sub> production each year. Manufacturers who wait for statutory regulations to come into effect will just fall behind the competition, because auto shut-off is available right now. Consumer tests have demonstrated its benefits. Today it's a known fact: energy optimization can go hand in hand with cost optimization.

Comparative test in the magazine Energie Schweiz, March 2008

## Easy to combine: Energy optimization and cost optimization with TIPPMATIC®

Whether it's a coffee machine, water heater, freezer, steam generator iron or shoe cleaning machine, TIPPMATIC® already has standard options for a wide range of applications. Expensive design modifications are unnecessary. With little effort, you can reduce energy consumption and cut costs all at once.

We'll be glad to work out a solution with you to fit your special needs. Give us a call!
